

Assignment 5

22/05/2026

1. Write a C program to display the process id of child and parent processes, where the child is created using the fork() system call.
2. Write a C program to create an orphan process. Also explain which process takes responsibility of the orphan process.
3. Write a C Program using a system call so that parent is going to wait until child finishes.
4. Write a C program using fork() system call to show how a file can be shared between processes.
5. Write a C program that will show the use of exec() and fork() system call together.
